Bluetooth connected

(1)What type of mobile phones does the wristband support?

A: system (Android 4.3 or above, iOS 7.0 or above), internal storage at least 1G, Bluetooth 4.0 or above;

(2)What functions does it have if it is not connected with smartphone?

A: If it is not connected with smartphone, the wristband can do step-counting or record sleep data. If the movement reminding function and alarm function were set and synchronized before, these two functions remains effective when using the wristband alone.

(3)How to adjust the wristband time?

A: The wristband time is adjusted automatically via APP connection; the adjusted time is synchronized with the smartphone.

(4)Why can't the wristband be searched while binding or connecting?

A:when the phone APP and bracelet Bluetooth pairing status, you need to press the button to light the bracelet screen.

B: Check if the wristband has bound with other phones, if so, it needs to be removed for another binding.

C: If the wristband has bound with another phone which is not there at present, the connection can also be removed via pressing key. Operation method: after lighten the screen, quickly and continuously press the key for over ten times to remove the connection.

- (5) Will the wristband be useless if the smartphone is lost?  
A: No, it won't. Just change a smartphone and download APP to bind the wristband, but the data on the previous phone gets lost.
- (6): Can I lend my wristband to others?  
A: Yes, you can. Just do it after removing the current binding. Otherwise, others cannot connect the wristband.
- (7) Is there a switch to turn on or off the wristband?  
A: No. It's not necessary. It will be dormant under low battery. Wake it up by charging.
- (8) Can the wristband answer the call?  
A: No. It only allows in-call reminding.
- (9) Can I take a shower or help my wife to wash vegetables when wearing the wristband?  
A: Yes, you can. The wristband is IP67 level waterproof, it is ok to contact water for a short time.
- (10) Will the smartphone connect to the wristband automatically when the Bluetooth is cut off?  
A: Yes, it will. Click , slide the screen in main interface downward
- (11) How long is the stand-by time?  
A: The latest BLE Bluetooth technology is adopted for the wristband, the power consumption is lower with stand-by time over seven days.

(12) How to judge that the wristband is in low battery?

A: Lighten the screen, the yellow indicator light will shine or the battery icon on the screen will shine for low battery reminding.

( 13 ) The device does not vibrate now. What's the cause?

A: Check the equipment is insufficient power, when the power is too low, will close the vibration warning, again full of electricity can restore vibration reminder.

(14) Can the wristband be charged via portable power supply?

A: Portable power supply with minimum output current less than 2000mA can be used for charging;

(15) When the smartphone screen becomes black for dormancy, the connection between wristband and smartphone is cut off, what's wrong with that?

A: It's a matter of setting. 1. Click setting → lower power mode management → select wristband application in protected background application;

B: Click setting → rights management → application, select wristband application, tick "trust this application"

( 16 ) Device only shows the time, did not show the number of steps and sleep data, what is the reason?

A : The first use before the need to bind the device with the mobile APP, device to activate all the display.

B : If you only want to use the device alone, you can first bind the device with the APP, and then close the phone side APP can exit the APP without lifting the binding

( 17 ) What if the wristband button has no respond?

A : Smart wristbands may have no power, try recharging them.

(18) Does all data shown on the screen belong to the current day?

A: Yes. All data will be cleared and reset after 12 a.m.

(19) The data of yesterday was not synchronized, can I still find it today?

A: Yes. The wristband data can be saved for 3 days, after that, it will be covered by new data. Synchronizing data once a day is suggested;

(20) The smartphone has alarm function, is it necessary for the wristband to open this function again?

A: The wristband alarm reminds us by vibration, it is quiet and won't disturb others.

(21) Why is the screen not lightened after I turned my wrist around?

A: Check if the function that hold up an arm to lighten the screen is turned on;

B: When it is in the state of step-counting, you need to stop and wait for seconds, then turn your wrist with your palm facing up so as to lighten the screen in a more effective way;

(22) The step-counting function seems not so accurate.

A: Step-counting will be done when it detects arm swing, small range of swing is not useful. The frequency which is the same as arm swing will be also counted as one step;
